

Per-trigger test (harness v2, pristine seeds): predictor and outcome share no algebraic term

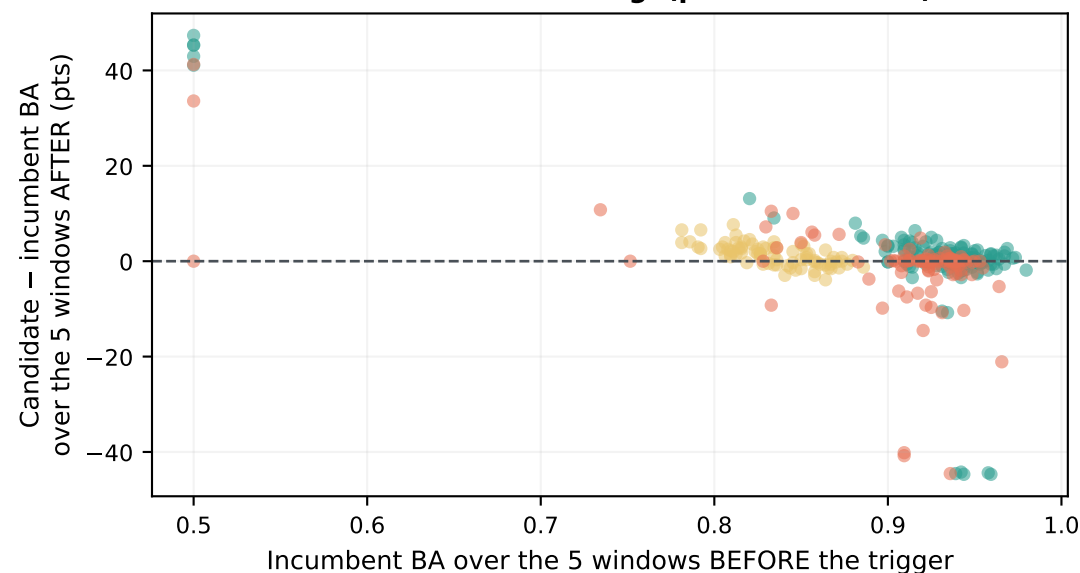

KS-max (classical)
Incumbent health predicts
the value of committing (pooled $r = -0.57$)

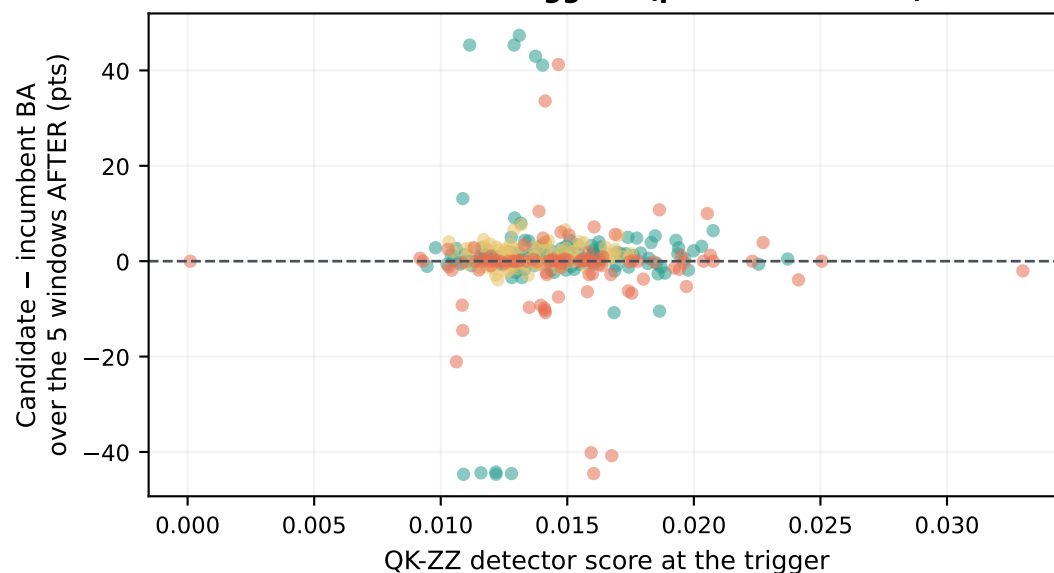

KS-max (classical)
No consistent score-value
association at triggers (pooled $r = +0.02$)

QK-ZZ (quantum)
Incumbent health predicts
the value of committing (pooled $r = -0.59$)

QK-ZZ (quantum)
No consistent score-value
association at triggers (pooled $r = +0.01$)

● PortScan (benefit) ● UNSW Recon (marginal) ● ToN-IoT (harm)
